## Foreign Agricultural Trade of the United States

July/August 1984

\*\*\*\*\*

\*  
 \*  
 \* IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION \*  
 \*  
 \* Foreign Agricultural Trade of the United States is published six times a \*  
 \* year with two supplements. Subscription prices are \$21 a year domestic \*  
 \* and \$26.25 foreign (prices subject to change). Send check or money order \*  
 \* payable to "Superintendent of Documents" to Superintendent of Documents, \*  
 \* U.S. Government Printing Office, Washington, D.C. 20402. For faster \*  
 \* service, call (202) 783-3238 and charge your subscription to your VISA, \*  
 \* MasterCard, or GPO Deposit Account. \*  
 \*  
 \*  
 \* IS IT TIME TO RENEW? \*  
 \*  
 \* Your subscription to this publication may be due to expire soon. If so, \*  
 \* you will get a renewal notice in the mail from GPO about 90 days ahead of \*  
 \* time. Only one notice is sent. You must return it promptly to ensure \*  
 \* uninterrupted service. If you have misplaced your renewal notice, use the \*  
 \* form on the back of this report. Be sure to attach mailing label. \*  
 \*  
 \*  
 \*

Prepared by the World Analysis Branch, International Economics Division,  
 Economic Research Service, U.S. Department of Agriculture. Principal  
 coordinators were John C. Dunmore III, Thomas A. Warden, and Thomasine B.  
 McCall. Mary L. Fant provided statistical support. Harriet Barlowe provided  
 word processing and table formatting support. Editorial support was provided  
 by Linda L. Hatcher, Research Information Branch, Economics Management Staff.  
 Data processing support was provided by Sharlan Lindow and William Meiller,  
 International Economic System Branch, Data Services Center, and Penni Korb,  
 World Analysis Branch.

# Digest

U.S. Agricultural Export Values Rise Despite Lower Volume (see p. 2). U.S. agricultural exports accelerated to \$29.8 billion during the first 9 months of fiscal year 1984 (October 1983-June 1984), 12-percent above year-earlier values, despite lower volumes. Continued higher prices for most farm commodities should lift agricultural export values for all of fiscal year 1984 to \$38 billion, 9 percent over those of last year. In contrast, volume is forecast at 141 million tons, down from last year's 145 million because of reduced soybean and soybean product exports.

U.S. Agricultural Imports Remain Strong (see p. 51). U.S. agricultural imports during the first 9 months, at \$14 billion, moved 13 percent above year-earlier levels, despite lower values in June. Coffee, fruits, vegetables, rubber, vegetable oils, and sugar contributed to the gain.

Dollar Jumps Sharply in May and June (see p. 91). High U.S. interest rates pushed the U.S. dollar higher against all major foreign currencies during May and June. A provision in the new tax bill to eliminate the 30-percent withholding on interest payments to foreigners, strong U.S. economic performance, and slow economic recovery in Western Europe also boosted the dollar's advance.

U.S. Agricultural Imports To Help Developing Countries' Earnings (see p. 96). Improved trade, stemming from economic recovery in industrialized countries, will spur revenues in developing countries. Their export revenues will help finance the over \$700 billion in total external debt they have accumulated, paving the way for them to become better customers for U.S. exports.

East Asia Markets Promising (see p. 101). East Asia could become a larger U.S. agricultural export market than Western Europe in 1984. U.S. agricultural exports to East Asia increased during fiscal year 1983, while they declined to most other areas.

# U.S. Agricultural Export Values Rise Despite Lower Volume

U.S. agricultural exports accelerated to \$29.8 billion during the first 9 months of fiscal year 1984 (October 1983-June 1984), 12-percent above year-earlier values. Boosted by higher prices for most farm commodities, agricultural export values for fiscal year 1984 are forecast to reach \$38 billion, 9 percent over those of last year. In contrast, volume is forecast at 141 million tons, down from last year's 145 million because of reduced soybean and soybean product exports.

Other factors affecting U.S. agricultural exports in fiscal year 1984 include an upsurge in sales of weather-damaged wheat for feed and the continuing high value of the U.S. dollar relative to major foreign currencies. Stronger than expected U.S. economic growth and high interest rates should keep the dollar strong through 1984.

## Soybean Export Volume Depressed

During the first 9 months, U.S. soybean exports fell 16 percent from the figure for the same months last year to 16.8 million tons; soybean meal fell 22 percent and soybean oil fell 2 percent. The volume of soybean exports, averaging 16 percent of total U.S. farm exports, is expected to remain depressed through fiscal year 1984.

U.S. soybean sales to Japan and the Netherlands during the first 9 months dropped 9 percent to 3.3 million tons and 28 percent to 2.8 million tons, respectively, due to tight supplies because of last year's sharply reduced stocks. This year, traditional soybean importers have switched to cheaper livestock feed ingredients, such as corn gluten and Canadian rapeseed. However, the situation has recently become tight for all oilseeds. Japan is expected to import 4.4 million tons of U.S. soybeans in fiscal year 1984, down from the 1983 level of 4.7 million tons. U.S. soybean exports are expected to improve in fiscal year 1985, as ample U.S. supplies enter the world market.

## Feed Wheat Competes with U.S. Corn Exports

Large supplies of weather-damaged Australian wheat, combined with high corn prices, have caused an active export market in wheat for feed. Australia is expected to market a substantial amount of weather-damaged wheat this year. South Korea, South Africa, and Mexico have already purchased over 2 million tons of Australian wheat for livestock feed, displacing some U.S. corn exports. The European Community is also attempting to sell some of its surplus wheat for feed. In order to compete, the United States is offering off-grade corn for sale. But as global feed grain supplies recover to normal levels, especially the U.S. corn crop, feed wheat's price advantage over feed grains will diminish.

## Wheat Exports to India Down Sharply

Demand for U.S. wheat through June at 27.5 million tons lagged 1983 exports by 2 percent. However, U.S. wheat exports for all of fiscal year 1984, forecast at 37.7 million tons, are expected to be slightly above those of last year. China and the Soviet Union have bought more U.S. wheat this year, but India has bought

substantially less due to a large food grain harvest and improved grain stocks. U.S. wheat exports to India during the first 9 months of fiscal year 1984 dropped to just over 1 million tons compared with almost 4 million tons last year. Total 1984 wheat exports to India are projected at 1.3 million tons and could drop even further next year if domestic food grain production continues to increase.

#### Wheat Exports to China Up 1 Million Tons

U.S. wheat exports to China during the first 9 months reached over 3 million tons, 60 percent ahead of the year-earlier level. China still needs to import more than 5 million tons of U.S. wheat in order to meet the terms of the U.S./China long-term grain agreement this calendar year and to make up for the shortfall from 1983. China also has agreed to buy wheat from other wheat suppliers this year. Fulfilling the U.S. and competitor grain agreements could strain China's internal grain transportation and storage facilities.

The Soviet Union has already met the terms of its long-term grain agreement with the United States this year. The Soviet Union imported 6 million tons of U.S. corn and over 4 million tons of U.S. wheat during the first 9 months. A significantly smaller Soviet grain harvest this year, presently forecast at 180 million tons, will mean substantially increased grain imports.

#### Corn Exports to Mexico Down; Sorghum Exports Improve

U.S. coarse grain exports in June lagged behind last year's pace, but shipments for fiscal year 1984 are forecast to increase 4 percent over last year's level to 56 million tons. Corn sales to the Soviet Union remain active, offsetting declines to South Korea and Mexico. Demand for U.S. corn on the world market should improve in fiscal year 1985 as the U.S. corn crop recovers.

U.S. coarse grain exports to Mexico during the first 9 months dropped 24 percent and are expected to remain depressed through 1984 because of the Mexican external debt situation. Lower corn exports account for most of the reduction from last year's 4 million tons, when Mexico took 8 percent of U.S. corn exports. Lower U.S. corn prices in 1985 should cause a shift in livestock feed back to corn.

U.S. sorghum exports to Mexico are stronger than expected and could top 2.8 million tons by the end of the year. Total U.S. sorghum exports are projected at 5.5 million tons in fiscal year 1984, but demand will probably decline to 5 million tons next year as price competition intensifies between corn and other feed grains.

#### Increased Exports to the Middle East

Poor crop prospects in the Middle East are raising projections for U.S. barley exports during fiscal year 1984. U.S. barley sales to Turkey, traditionally a barley exporter, may reach 400,000 tons, possibly indicating future barley purchases for Turkey's expanding livestock sector. In addition, Japan is expected to increase its barley imports this season to rebuild depleted feed stocks.

U.S. rice exports rose slightly during the first 9 months to 1.7 million tons from year-earlier levels, but total volume is expected to reach 2 million tons in fiscal year 1984, down from last year's 2.3 million tons. While rice sales to Saudi Arabia are expected to decline, those to Iraq are forecast to increase and could reach 300,000 tons due to increased credit authorizations under the Export Credit Guarantee Program (GSM-102). Saudi Arabia and Iraq typically account for a

quarter of U.S. rice exports. The outlook for U.S. rice shipments in fiscal year 1985 does not call for much improvement.

#### Cotton Sales Rise

U.S. cotton exports during the first 9 months moved 38 percent ahead of year-earlier sales. Although higher prices caused the export pace to slow in recent months, rains in the cotton-growing regions eased the pressure on tight U.S. cotton supplies, and lower prices have generated additional export demand. U.S. cotton exports are expected to top 1.6 million tons this fiscal year, 33 percent larger than last year's level. However, forecasts for a record-high U.S. cotton crop this season and improved cotton harvests elsewhere will cause U.S. cotton exports to return to more historic levels. (Pat Haslach, World Analysis Branch)

# U.S. Agricultural Imports Remain Strong

Agricultural import values totaled \$14 billion during the first 9 months of fiscal year 1984 (October 1983-June 1984), \$1.7 billion (13 percent) more than those for the same period in 1983. Import volume for many farm products increased, especially for coffee, fruits, vegetables, rubber, vegetable oils, and sugar. Imports during June, however, dropped to less than \$1.3 billion from \$1.6 billion in May. The developing nations supplied 60 percent (\$8.4 billion compared with \$5.3 billion from the developed countries) of all U.S. farm product imports. Brazil is the largest source of U.S. farm imports, followed by Canada, Mexico, Indonesia, Australia, the Philippines, and France.

## Competitive Values Up

Competitive product imports totaled \$9.1 billion during the first 9 months, 12 percent higher than year-earlier levels. Sugar, fruits, vegetables, vegetable oils, wine, and malt beverages accounted for most of the value increase, more than offsetting declines for cheese, pork, beef, tobacco, and live cattle.

Sugar Import Values Higher; Beef, Pork, and Cheese Lower. Continuing the upward trend for fiscal year 1984, sugar import quantities totaled 158,000 tons in June, well over the 126,000 tons of June 1983. Sugar imports during the first 9 months at 2.3 million tons, were 21 percent above the year-earlier level, reflecting larger quota exemptions and strong re-exports. Domestic use of sugar in fiscal year 1984 is estimated at 7.9 million tons <sup>1/</sup> compared with 8.1 million in 1983, reflecting the shift in soft drink ingredients from sugar to high-fructose corn syrup. Sugar imports during the 9-month period climbed 27 percent to over \$906 million. Sugar import unit prices, averaging about \$400 per ton, recovered in the first 9 months compared with \$384 per ton in 1983. The principal sugar suppliers were the Dominican Republic, the Philippines, Brazil, Argentina, and Australia.

Imports from Australia, the United States' major beef supplier, fell 26 percent from the year-earlier level to 160,000 tons because of larger domestic beef supplies and reduced exportable supplies in Australia. During the 9-month period, beef imports from New Zealand, the second major supplier, fell from 1983's 117,000 tons to only 71,000 tons. Beef and veal import volume fell 21 percent to 384,000 tons; value dropped 18 percent to \$823 million. In contrast, U.S. import volume for pork in the 9-month period increased 22 percent, while average import unit prices declined 20 percent.

Cheese imports, at \$286 million, declined 7 percent during the first 9 months from the year-earlier value, while volume, at 101,000 tons, remained near the 1983 level. Average monthly U.S. wholesale prices for cheddar cheese (40-pound blocks) dropped from \$172 in October 1983 to \$169 in June 1984. Western Europe was the leading cheese supplier, providing 71 percent of the total volume.

Fruits, Vegetables, and Vegetable Oil Values Up. Larger fruit juice imports pushed total fruit and preparation imports up 17 percent during the first 9 months of fiscal year 1984 to \$948 million. Fruit juice import volume jumped 14 percent above year-earlier levels to 19.2 million hectoliters, and values rose 23 percent

---

<sup>1/</sup> Foreign Agricultural Service. Sugar, Molasses, and Honey. FT-1-84. May 1984.

to \$450 million, because of higher prices. Imports of orange juice from Brazil and apple and pear juices from South Africa and Argentina accounted for most of the growth.

Vegetable oil imports increased nearly 10 percent over year-earlier levels to 617,000 tons, led by coconut and palm oils supplied primarily by the Philippines and Malaysia. Sharply higher vegetable oil prices on world markets accounted for a 74-percent value gain to \$497 million. Vegetable import values expanded 18 percent to \$1 billion, with higher volumes for most fresh vegetables from Mexico. Fresh tomatoes, the major imported vegetable, grew 13 percent to 339,000 tons, but import unit prices declined 38 percent.

Unmanufactured tobacco imports declined 4 percent during the 9-month period to 135,000 tons; a slight price decrease lowered values 3 percent to \$403 million. Oriental types came primarily from Turkey and Greece.

Dutiable cattle entries in the first 9 months of fiscal year 1984 fell sharply to 681,000 head (\$223 million) from 838,000 head (\$268 million) in fiscal year 1983. About 245,000 head of Canadian feeders and stockers entered U.S. markets during the 9-month period compared with 368,000 head during the same months in 1983. Because of lower prices, swine entries from Canada moved up 83 percent to 697,000 head. Malt beverage and wine imports registered value gains of 10 percent.

#### Noncompetitive Imports Up

Noncompetitive imports during the first 9 months, accounting for nearly 35 percent of all U.S. farm imports, rose 17 percent over year-earlier levels to \$4.9 billion. Coffee and products, representing nearly half of all noncompetitive imports, totaled \$2.4 billion and were 9 percent ahead of year-earlier values. Volume rose 6 percent to 824,000 tons, and unit import prices increased from \$1.21 per pound during the first 9 months of fiscal year 1983 to \$1.31 during the same period in 1984. Average monthly wholesale prices for Brazilian coffee in the U.S. market increased from \$1.42 per pound in October 1983 to \$1.48 in May and then declined to \$1.45 in June 1984. Brazil, Colombia, Mexico, Indonesia, El Salvador, Guatemala, the Ivory Coast, and Ecuador were the major suppliers.

Cocoa bean and product imports for the first 9 months in fiscal year 1984 totaled \$764 million, 14 percent higher than year-earlier levels. Cocoa bean imports dropped 39 percent to 124,000 tons due to higher import unit prices, poor crops in West Africa, and reduced inventories. The New York cocoa futures price averaged 91 cents per pound in October 1983 compared with 97 cents in June 1984. Imports of cocoa butter, powder, and chocolate increased considerably in 1984. The Ivory Coast, Brazil, the Dominican Republic, and Ecuador were the major suppliers.

Rubber, the third major noncompetitive import, increased 16 percent to 607,000 tons as low stock levels were replenished. However, unit import prices of rubber averaged 28 percent higher than those of a year ago. Over half of U.S. rubber imports came from Indonesia, with nearly all of the remainder from Malaysia.

Banana imports in the first 9 months moved 8 percent above year-earlier volumes to 2.1 million tons, despite reduced shipments from Honduras, the United States' largest banana supplier. Value totaled \$519 million, as unit prices moved up.

Banana imports from Costa Rica, Colombia, and Ecuador increased sharply. Other noncompetitive imports, notably tea, spices, essential oils, and wool gained in both volume and value. (Charles E. Goode, World Analysis Branch)

# Dollar Jumps Sharply in May and June

The U.S. dollar appreciated strongly during May and June against the five major currencies most important to U.S. agricultural trade. By the end of June, the dollar stood 10 percent higher than its 1983 average against European currencies, 8 percent above that for the Canadian dollar, and nearly equal to its 1983 peak against the Japanese yen. The dollar's advance stemmed from high and rising interest rates in the United States, a booming economy, the Iran-Iraq war, and a change in interest withholding that benefits foreign investors in the United States.

## Interest Rates Surge

The major cause of the dollar's strength was a general and sustained rise in interest rates paid on dollar-denominated financial instruments in the United States and in Eurocurrency markets. Higher rates of return made these investments more desirable than those issued in other currencies. For example, the London interbank offered rate on 6-month dollar deposits rose from 11.4 percent on May 1 to 12.7 percent (annualized) at the end of June. As a result, the interest rate advantage held by dollar assets over mark assets increased from 5.4 to 6.2 percent during the same period. Despite rising interest rates in West Germany, the mark still cannot compete with a U.S. dollar that promises higher returns.

The U.S. Congress added an unexpected inducement to the U.S. dollar's interest rate appeal: House and Senate conferees, as part of new tax legislation, voted to rescind the 30-percent withholding on interest payments made to foreign holders of U.S. Government debt instruments. Final passage of this provision seems likely. The most immediate consequence of the action will be to make current returns from holding U.S. Government securities larger. The safest investment in the world, the U.S. Government, will then pay high returns without curtailing the ability of recipients to use the earned income.

## Robust U.S. Growth Encourages Dollar Purchases

An almost unbroken string of positive economic news during May and June gave another boost to the dollar. The strength of the U.S. economy has convinced many speculators and investors that the United States is the best place for sustained high income growth. Those who chose to invest in U.S. stocks or bonds are keeping them, while more are purchasing what many believe are low-priced investments.

The lackluster recovery in Western Europe, best exemplified by West Germany, has been mirrored in sluggish stock markets there. Japanese capital markets also provide few opportunities, allowing only limited access to foreign investment.

## Middle East Crisis Supports Dollar

The Iran-Iraq conflict supports the U.S. dollar in two ways. First, it encourages the purchase of dollars by individuals fearful of instability. U.S. currency, more than any other asset, promises security and convertibility (plus certain income, given the high interest rates noted above). Second, the threat of oil supply disruptions has caused a depreciation of currencies from those countries heavily dependent on imported petroleum, especially the Japanese yen. Either a

rise in oil prices or a petroleum shortage would adversely affect economic growth in Japan, as well as cause a deterioration in its external payments position. Both possibilities lower the yen's current value.

The British pound also suffers from the crisis in the Middle East, surprising many observers. Any possibility of a rise in oil prices would normally send the pound up. The United Kingdom derives a substantial proportion of foreign exchange earnings from oil. However, the price of petroleum shows virtually no movement upward (rumors of discounts by Iran have served to lower selected spot prices). Currency traders can, therefore, concentrate on the weaknesses in the British economy (labor strife, languid growth, and relatively low real interest rates) when deciding to buy or sell sterling.

#### Canadian Dollar at Record Low

The Canadian dollar accelerated the rate of depreciation against the U.S. dollar, a weakening which began in November of 1983. Two factors contributed to the falloff. First, the potential change in Government offered by Pierre Trudeau's resignation created some uncertainty in foreign exchange markets. Such trepidation almost always lowers a currency's value. The Canadian dollar is generally a very lightly traded money; the decline in its value has, as a consequence, been particularly acute. Second, many participants in foreign exchange markets believe that inflation in Canada will soon increase, pointing to recent statements by the Bank of Canada that imply rising rates of money growth. (David Stallings, World Analysis Branch)

# U.S. Agricultural Imports To Help Developing Countries' Earnings

Economic recovery is under way in the United States and in other industrialized and developing countries. The developing countries' economies are expected to recover this year with an overall (weighted average) gross national product (GNP) growth rate projected at 3.6 percent, but the debt situation will continue to limit growth in some developing countries. Total external debt in Latin America, Asia, Europe, and Africa exceeds \$700 billion. The improved trade situation and higher prices for commodities (the primary export earner in many developing countries) will increase revenue prospects for developing countries. Export revenue will help alleviate the developing countries' debt burdens but only as long as economic growth continues and markets remain open in the developed countries.

## The Debt Crisis in the Developing Countries

The major causes of the debt crisis are the cumulative effects of the prolonged recession and extremely high real interest rates. Growing protectionism in the industrialized countries also contributed to the debt crisis and looms as a larger threat to long-term growth and stability in the developing countries. The large increases in debt, which occurred during a decade of high world inflation rates and relatively low real interest rates, stem largely from the 1973 and 1979 oil price increases. Large surpluses were accumulated by the Organization of Petroleum Exporting Countries and deficits by the oil importing developing countries, which were financed by borrowing. Many of the developing countries, such as Brazil, Mexico, Argentina, and the Philippines, were viewed as good credit risks because of high growth rates. In addition, governments were not perceived as having a high degree of investment risk.

By the eighties, the world economy was in a deep recession brought on by restrictive monetary policies in the industrial countries, but credit still continued to flow. A rising proportion of the debt held by the developing countries was, at variable interest rates, linked to the London interbank offered rate on 3-month dollar deposits or to the prime rate in the United States. As a result, escalating interest payments, caused by high interest rates, were consuming larger shares of the developing countries' export earnings. In August 1982, Mexico, hard hit by falling oil prices, requested a standstill on repayment of principal and the restructuring of its debt. By the end of 1982, the total external debt of the developing countries' came to over \$600 billion, and between 1981 and 1983, about 30 developing countries completed or were engaged in debt restructuring.

The recession also affected world commodity prices and reduced export earnings to the developing countries. By December 1982, commodity prices had reached the lowest level in almost 30 years. The situation was serious for many of the developing countries whose primary export earnings are tied to raw materials and often to a single commodity. Although commodity prices have begun to recover, they have not reached the peaks of pre-1981.

The majority of the developing countries' debt is denominated in dollars. The rise in the inflation-adjusted value of the dollar in foreign exchange and the U.S. interest rate has led to a corresponding increase in the resources that the

developing countries have to allocate to international debt service, in part offsetting the favorable effects of rising trade. Every percentage point increase in interest rates adds billions to the debt service of the developing countries. In 1982, interest payments on the outstanding debt of Mexico, Brazil, and Argentina consumed 40 percent of their export earnings.

The developing countries, working with the International Monetary Fund (IMF), have implemented austerity programs, which in the long term are aimed at debt repayment and economic growth and typically require exchange rate policies, debt expenditure and import cutbacks, and export revenue expansion. Therefore, any increased import demand for the developing countries' agricultural products will help alleviate debt strains and eventually expand export opportunities for the United States.

### U.S. Imports Important to Developing Countries

The U.S. economic recovery contributes to import growth from the developing countries. Since fiscal year 1979, developing countries have supplied an average of over 60 percent of U.S. agricultural imports. Most agricultural imports from developing countries are horticultural and tropical products compared with meat, dairy, wine, and beer imports from the developed countries. U.S. imports in fiscal year 1984 are forecast to reach \$17.5 billion, a 7-percent increase over those of last year, with the developing countries expected to account for over \$10 billion.

The bulk of the developing countries' debt is held by countries in Latin America, and more than half that region's annual export earnings are committed to servicing its \$350-billion foreign debt. Brazil and Mexico alone owe more than one-third of the debt of all developing countries. The region is expected to show some signs of economic recovery this year compared with almost no growth in 1983. Since 1979, Latin America has provided almost 40 percent of U.S. agricultural imports. Imports from Latin America were up 16 percent in the first 9 months of fiscal year 1984 and are expected to reach \$6.4 billion by the end of the year, a 5-percent increase over those of fiscal year 1983. The increase can be attributed to imports of coffee, sugar, and cocoa products.

Brazil has the largest international debt in the world, close to \$100 billion. The United States also has an agricultural trade deficit with Brazil. U.S.

<sup>1/</sup> Excluding Japan, China, and Taiwan.

imports from Brazil have averaged almost \$2 billion annually since fiscal year 1979 and represent 10 percent of total U.S. imports. U.S. agricultural imports from Brazil during the first 9 months of fiscal year 1984 moved 7 percent ahead of year-earlier levels and are expected to exceed the \$1.7 billion imported in fiscal year 1983. On average, Brazil has been the primary supplier of various agricultural products to the United States since 1979, including coffee (25 percent of the U.S. market), sugar (16 percent), cocoa (23 percent), and nuts (26 percent). Brazil is also a major supplier of fruits, vegetables, and fruit juices to the U.S. market.

Nuts and prep.	:	238	Brazil	71	Philippines	34

Mexico accounts for close to 7 percent of U.S. agricultural imports and has an external debt of approximately \$90 billion. Although Mexico's debt is extremely high, the IMF austerity measures Mexico has been following are reviving the economy. U.S. agricultural imports from Mexico, at \$1.2 billion in fiscal year 1983, were 9 percent ahead of those of 1982 and about average for the past 5 years. Mexico ranks third behind Brazil and Canada in value as a major exporter to the U.S. market. Since 1979, Mexico has been the number one supplier of U.S. vegetable imports, averaging 11 percent of the market. Mexico also supplies about 25 percent of U.S. fruit imports.

Colombia is an exception in Latin America with relatively low levels of foreign debt (about \$10 billion) and sufficient international reserves. However, Colombia has had difficulties securing new credit because of its geographical location. Debt problems elsewhere in the region and low world coffee prices have hurt Colombia's exports. Coffee represents 60 percent of Colombia's agricultural exports. Colombia, on average, supplies 14 percent of U.S. coffee imports and even surpassed Brazil as primary supplier in fiscal year 1979. Since 1979, U.S. agricultural imports from Colombia have averaged over \$750 million. However, imports in fiscal

year 1983 at \$560 million dropped 47 percent from the record \$1 billion set in fiscal year 1980 due to depressed coffee prices.

The Central American countries of Costa Rica, Honduras, and Ecuador are the primary suppliers of U.S. bananas and plantains; each country has close to a quarter of the U.S. market. Bananas and plantains represent almost \$500 million annually in foreign exchange to the region. Coffee, sugar, and other tropical products are also imported from the region.

Depressed world sugar prices lowered U.S. agricultural imports from the Dominican Republic to \$371 million in fiscal year 1983, 27 percent below the \$500 million imported in 1980. The Dominican Republic supplies an average of 13 percent of U.S. sugar imports and depends on sugar exports for revenue to finance its \$2-billion debt. Depressed sugar prices are aggravating the economic troubles of the Dominican Republic, which recently experienced riots when trying to implement austerity measures detailed under IMF loan requirements.

The level of debt to GNP in Asia is comparable to that of Latin America, but Asian borrowers are much more export-oriented and competitive in manufactured exports. As a result, the debtor countries in Asia, except for the Philippines, are in a relatively better economic position, and their economies are expected to experience strong growth in 1984. The Asian countries, excluding Japan, China, and Taiwan, account for an average of 11 percent of the U.S. import market. Imports include mainly rubber, oilseed products, fruits, nuts, and spices and are expected to reach \$2 billion in fiscal year 1984.

The loss of oil revenues in Indonesia has necessitated dramatic cuts in development plans. However, the projected 3-percent growth rate should generate acceptable levels of export earnings to help finance Indonesia's \$29-billion debt. Since 1979, Indonesia has exported over \$600 million annually in agricultural commodities to the United States. Indonesia is the major supplier of rubber to the United States and has, on average, 52 percent of the import market. U.S. rubber imports increased 4 percent in fiscal year 1983 over those of 1982. This year, U.S. rubber imports are booming and are expected to reach \$900 million, slightly above the record set in 1979, due to the recovery in the automobile industry.

Economic recovery in the Philippines is tenuous. Capital flight and unstable political events jeopardize repayment of the \$27-billion debt. Recently, the Philippine Government devalued the peso over 20 percent, the third devaluation in the past year and part of an IMF loan requirement. As a result, the U.S. market, which represents nearly \$500 million, is crucial for economic recovery in the Philippines. The United States imports oilseed products, nuts, and fruit from the Philippines. The Philippines is the primary supplier of oilseeds, mainly coconut oil, with an average of 38 percent of the U.S. oilseed import market. Since 1979, the Philippines has provided 87 percent of U.S. coconut oil imports, but their share has declined from a peak of 93 percent in fiscal year 1979 due to increased competition from Oceania and Malaysia.

Malaysia relies on its exports of primary products, such as rubber and palm oil, for export revenues to finance its \$17-billion debt. Malaysia accounts for 42 percent of the world's production of natural rubber and, along with Indonesia, is a major supplier to the United States. Malaysia is the world's largest producer and exporter of palm oil, with an average of 94 percent of the U.S. import market, valued at \$45 million. Since 1979, the U.S. has imported over \$300 million annually in farm products from Malaysia, mainly palm oil, rubber, coffee, tea, cocoa, and pepper.

Although Africa accounts for only a small percentage of U.S. agricultural imports, the U.S. market is important to many countries in the region which rely on cash crops to earn foreign exchange. In fiscal year 1983, Africa had 7 percent of the U.S. import market, valued at \$1.1 billion. Africa is forecast to export over \$1.2 billion to the United States in fiscal year 1984. Since 1980, largely as a result of Government policies that encourage producers, the Ivory Coast has emerged as the world's largest producer and exporter of cocoa. While the size of the crop may vary dramatically from year to year, the Ivory Coast has supplied over 20 percent of U.S. cocoa imports, which were valued at almost \$200 million in fiscal year 1983. In fiscal year 1983, the U.S. imported almost \$300 million of cocoa and coffee products from the Ivory Coast, helping to alleviate its \$9-billion international debt.

The economic situation is critical in many developing countries, and many years may pass before those countries return to their previous growth paths. Each developing country has diverse needs and export capabilities, but each country needs both inflows of foreign credit to maintain growth and access to the U.S. market. By importing from the developing countries, the United States is laying the groundwork for future export expansion. (Pat Haslach, World Analysis Branch)

## East Asia Markets Promising

East Asia stands out as one regional market in which the United States has done relatively well in recent years. <sup>1/</sup> U.S. agricultural exports to East Asia dropped in fiscal year 1982 as they did for most markets. However, last year, while the value of total U.S. agricultural exports declined for the second consecutive year, the value of exports to East Asia increased. While U.S. agricultural export values in 1984 are expected to be 9 percent above 1983 levels (fig. 1), exports to the 4 countries of East Asia are expected to increase 16 percent, and for the first time, East Asia is forecast to be a larger market for U.S. agricultural products than the 17 countries of Western Europe. This has happened at a time when the EC-10 has expanded agricultural production and has become more of a competitor of the United States in third markets than a U.S. market. There has also been a relative shift in total U.S. trade away from Europe and toward Asia, particularly the Pacific basin countries.

East Asia has been an important U.S. market for some time, but it has become more important in the last few years. Japan, the region's largest import market for agricultural products, has been the United States' largest single-country market for many years, taking an average of 15-16 percent of U.S. farm exports each year. South Korea and Taiwan are also top markets. With relatively rapid economic growth in all the region's countries this year and last, 28 percent of U.S. agricultural exports are forecast to go to the region this fiscal year, up from 26 percent last year (table 15).

East Asia is a ranking market for many U.S. agricultural products (table 16). For example, more than 60 percent of U.S. exports of beef, pork, and cattle hides go to East Asia, as well as 40 percent of coarse grains and about 55 percent of cotton exports. These countries depend on agricultural imports because they have large, affluent populations but inadequate agricultural land resources. The region exports small amounts of agricultural products, mainly processed items.

The U.S. share of total agricultural exports to East Asia has risen at a time when some are questioning the competitiveness of U.S. exports. The U.S. share of the region's agricultural imports increased from 39 percent in 1977-79 to 41 percent in 1980-82. The U.S. share of imports rose for Japan, held steady for Taiwan and South Korea, and declined somewhat for Hong Kong.

The U.S. share of the principal bulk commodities--corn, sorghum, soybeans, wheat, and cotton, representing about 35 percent of the region's agricultural imports--has been variable. Trends that suggest fundamental change in U.S. competitiveness in the region are not clear yet (table 17).

Corn. East Asia imported corn valued at \$3.2 billion in 1983. The United States has held a dominant position in this market, averaging a share greater than 80 percent during 1977-83. Principal U.S. competitors are Thailand and South Africa. The U.S. share of the region's market peaked at 90 percent in 1980 and at 91 percent in 1983 because of relatively tight supplies in competitor countries (fig. 2).

---

<sup>1/</sup> In this report, East Asia comprises Japan, South Korea, Taiwan, and Hong Kong.

Sorghum. The region imported sorghum valued at \$500 million in 1983. The principal suppliers of sorghum to East Asia are the United States, Argentina, and Australia. The U.S. share of this import market has fluctuated more dramatically than that of corn imports, averaging 42 percent during 1977-79 and jumping to 85 percent in 1980, mainly due to a change in trading patterns following the partial U.S. embargo of grain sales to the Soviet Union (fig. 2). Argentina, which previously supplied about 45 percent of the region's sorghum imports, exported very little to East Asia in 1980. Most of Argentina's sorghum went to the temporarily more lucrative Soviet market. Since 1980-81, export patterns have returned to what they were before the embargo. The Argentine share has risen, and the U.S. share has dropped. Last year, the U.S. drought and the Payment-In-Kind program also hurt the U.S. share.

Soybeans. East Asia imported \$1.8 billion worth of soybeans in 1983. The United States dominates the region's soybean market, averaging more than 90 percent for many years (fig. 2). The region imported a record 6.4 million tons in 1983. Nevertheless, the U.S. share, sensitive to price changes, dropped from 97 percent in 1982 to 94 percent in 1983 because of more expensive U.S. beans from the drought-reduced Midwestern crop. The principal U.S. competitor in the region is the People's Republic of China whose share increased from 2 percent in 1982 to 4 percent in 1983. It specializes in the export of a food-quality soybean that normally sells at a premium. Brazil, a small soybean supplier to the region in the early eighties, is now even less important in the East Asian market because its policies emphasize exports of soy products. East Asia's large oilseed crushing capacity assures that the region will continue to import large quantities of soybeans and less of the soybean products.

Wheat. The region's wheat imports reached \$1.6 billion in 1983. The United States competes with Canada and Australia in this market. The U.S. share averages around 70 percent and has been reasonably stable since 1977 (fig. 2). It dropped slightly from 72 percent in 1981 to 70 percent in 1983 due in part to some price advantage of Canadian wheats. The U.S. share of world wheat trade sharply declined from 49 percent in 1981 to 38 percent in 1983 because of keener competition from Argentina and Canada in other markets.

Cotton. East Asia took \$2.2 billion worth of cotton imports in 1983. Leading suppliers include the United States, the Soviet Union, Pakistan, and Latin America. The import level for the region has been stable since 1978, a pattern shared by each of the region's four countries. Recession and rising costs of production have forced adjustment in the region's textile industry.

The U.S. share of the region's cotton imports dropped from 59 percent in 1982 to 49 percent in 1983 mainly because of drought and policy-induced higher prices for U.S. staples that affected the U.S. performance in the Taiwan, Hong Kong, and South Korean markets (fig. 2). The United States improved its share of the Japanese market because of limited supplies from traditional suppliers.

Overall, the U.S. share of East Asian agricultural imports, rising marginally in recent years, has not changed much between the export boom of the late seventies and the recession of the early eighties. The U.S. corn, sorghum, and cotton share has fluctuated sharply from one year to the next, the wheat and soybean share less so. Changes in relative prices between U.S. products and competing products, due to the U.S.-Soviet embargo and production shortfalls in the United States and in competitor countries, appear to be an important explanation.

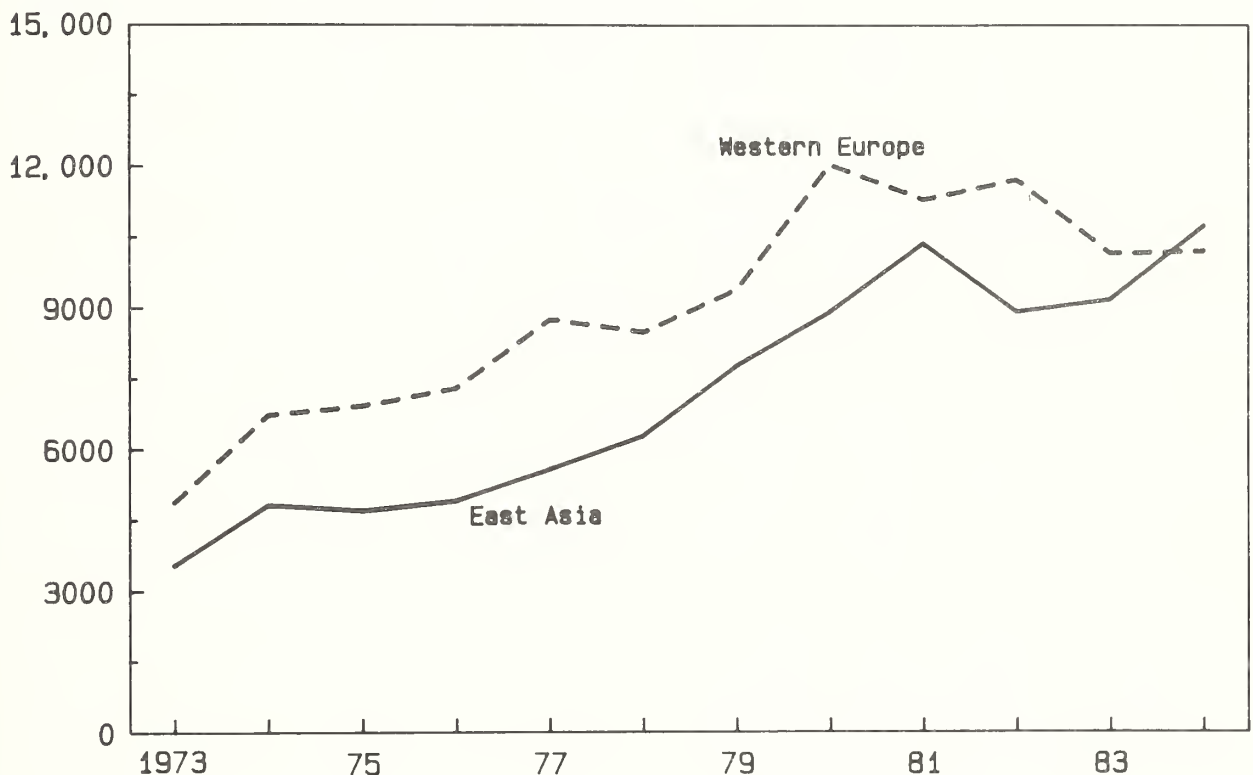

The following factors may keep the U.S. share of East Asian agricultural imports large and stable:

- o Stable and predictable import demand for large volumes of agricultural products, fostering stable trading relationships between the United States and the region.
- o A dynamic pork and poultry industry dependent on imports of feed grains and soybeans for which the United States has a comparative advantage.
- o Appreciation of the U.S. dollar against the region's principal floating currency (the yen) which has not been as great as against other foreign currencies.

East Asian agricultural imports respond to changes in relative prices. Despite relatively good performance in the East Asian market, continued strength of the dollar, depressed commodity prices, and farm programs that underpin U.S. commodity prices could eventually spell the deterioration of U.S. competitiveness in East Asia. (Bill Coyle, Asia Branch)

### Corn

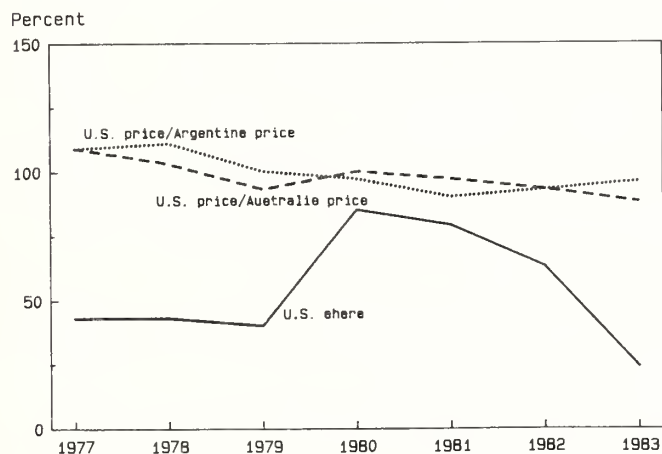

### Wheat

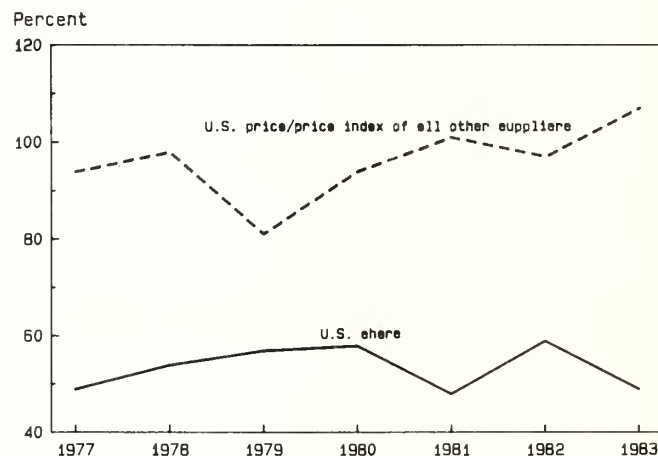

### Soybean

### Sorghum

### Cotton

\*The price ratio is defined as the import unit value (commodity, insurance, and freight) of the U.S. product divided by that of a major competitor multiplied by 100. When the slope of the graph is positive, it means that the U.S. product is becoming relatively more expensive than the competing product. When the slope is negative, the reverse holds.

1/ The East Asian data are for calendar years and are aggregated from annual issues of:

--Government of Japan, Ministry of Finance, Japan Exports and Imports: Commodity by Country.

--Hong Kong Census and Statistics Department, Hong Kong Trade Statistics.

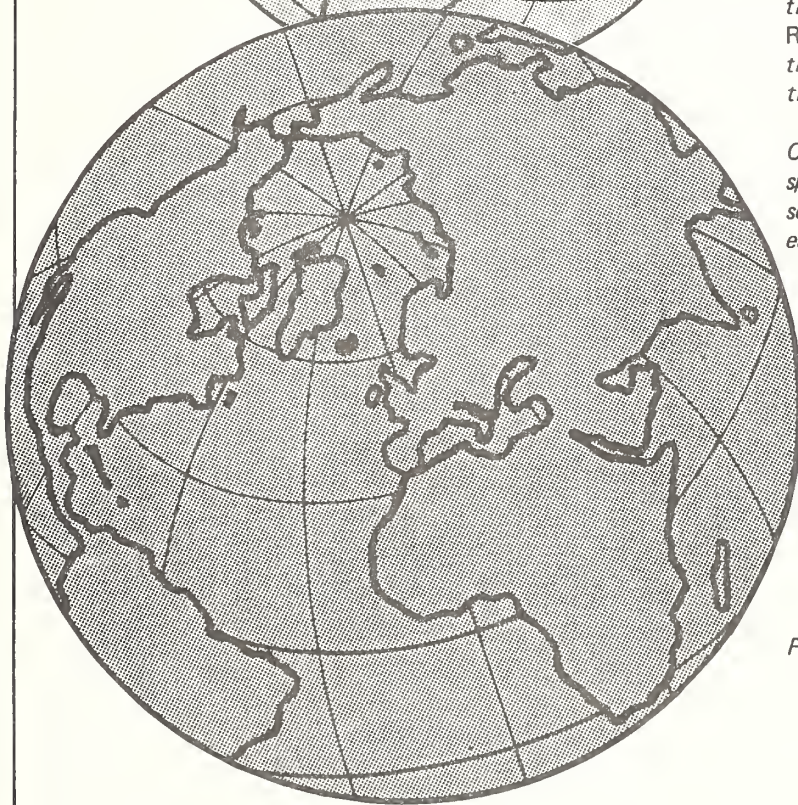

--Republic of Korea, Office of Customs Administration, Statistical Yearbook of Foreign Trade.

--Republic of China, Inspectorate General of Customs, The Trade of China.

2/ The world percentages are based on data from the USDA data base and are for the following years: wheat, July-June; corn and sorghum, July-June prior to 1979 and October-September for 1979 and after; soybeans, October-September; cotton, August-July.

3/ Food and Agriculture Organization of the United Nations, FAO Trade Yearbook, 1982, vol. 36, Rome, Italy, 1983.

# A CLOSER LOOK AT THE WORLD

*Slow economic growth, tightening export markets, and aggressive trade practices make detailed information on world agriculture a must. World Agriculture Regional Supplements are ready with the information, wrapping up regional agricultural production, trade, and policy.*

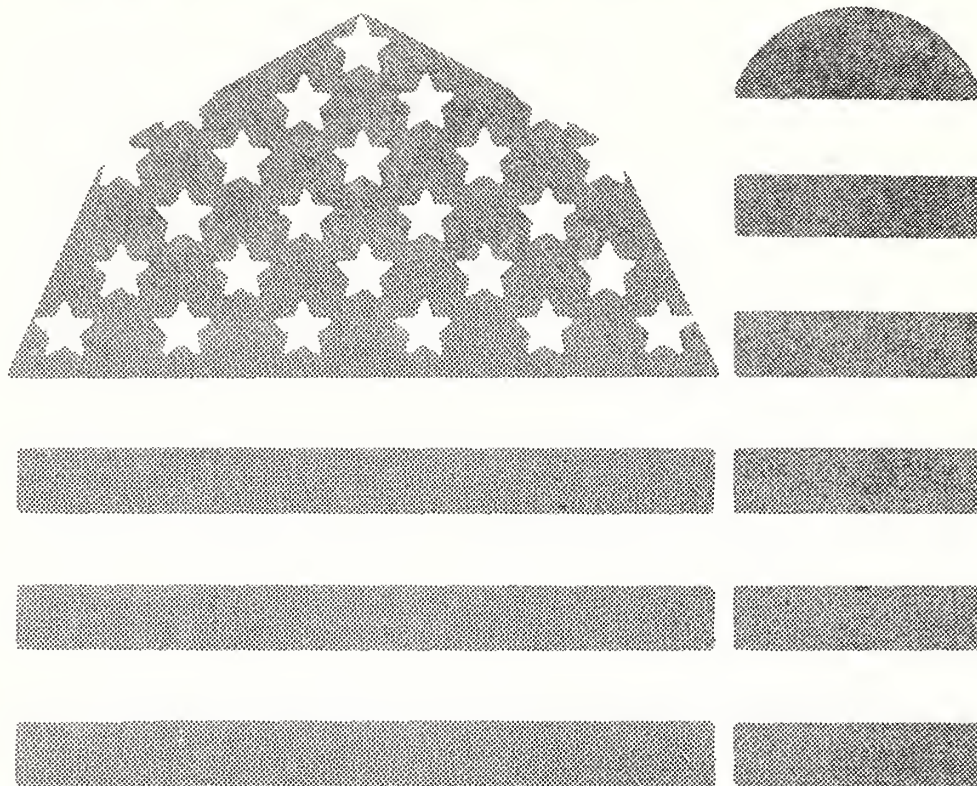

*Comprehensive tables and thought-provoking special articles are also included. Issued yearly, the series has been expanded to 11 reports, 32 pages each. Reports may be ordered individually or as a set.*

- North America & Oceania
- East Asia
- Middle East & North Africa
- USSR
- Eastern Europe
- Southeast Asia
- Western Europe
- Latin America
- China
- South Asia
- Sub-Saharan Africa

# Information for Decisionmakers

The **Economic Research Service** analyzes developments and trends affecting agriculture and rural America. Performance of the agricultural industry, including the producing, processing, and marketing sectors, is an important area of research. Analysts provide economic information to help you make more knowledgeable decisions.

Economists project prices, supplies, demand, and use of specific crops, dairy, poultry, livestock, and other products. They assess foreign developments and agricultural policies to determine the impacts on U.S. trade.

Use, conservation, and development of natural resources affecting economic growth are a major area of research. Trends in population, employment, and housing, and economic adjustment problems are closely reviewed and reported.

**Reports** lists all current agency publications and prices. To be placed on its free mailing list, write to:

**Information Division

Keep tabs on farm income and expenses with the *Economic Sector* series.

This series of five separate reports, offered now on a subscription basis, explores the economic status of U.S. farms to give you a comprehensive update on where agriculture is headed.

You will be receiving:

- 1. *Income and Expenses of Farms*
- 2. *Production and Sales of Farms*
- 3. *Assets and Liabilities of Farms*
- 4. *Government Payments to Farms*
- 5. *Other Farm Income*

Each report is available on a subscription basis for \$15.00 per report. The subscription price for all five reports is \$75.00. The subscription price includes a complimentary update on where agriculture is headed.

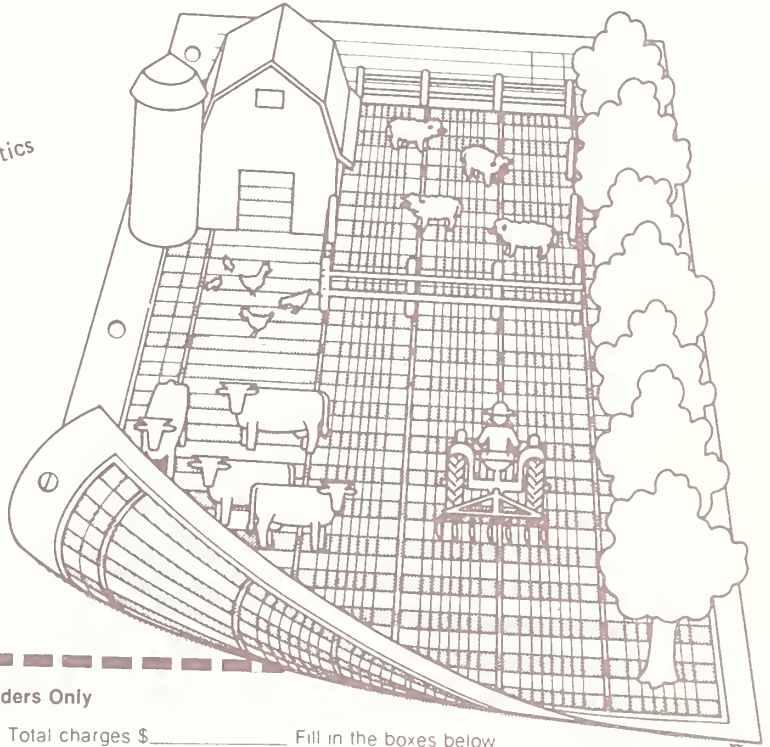

For more information, contact your nearest McGraw-Hill office or write to McGraw-Hill, 1221 Avenue of the Americas, New York, N.Y. 10020.

**McGraw-Hill**

Here are the titles you will be receiving:

- Income and Balance Sheet Statistics
- State Income and Balance Sheet Statistics
- Farm Sector Review
- Production and Efficiency Statistics
- Costs of Production
